

Monitoring Active Directory – TryHackMe Room Completed!

I'm excited to share that I have successfully completed the Monitoring Active Directory room on TryHackMe.

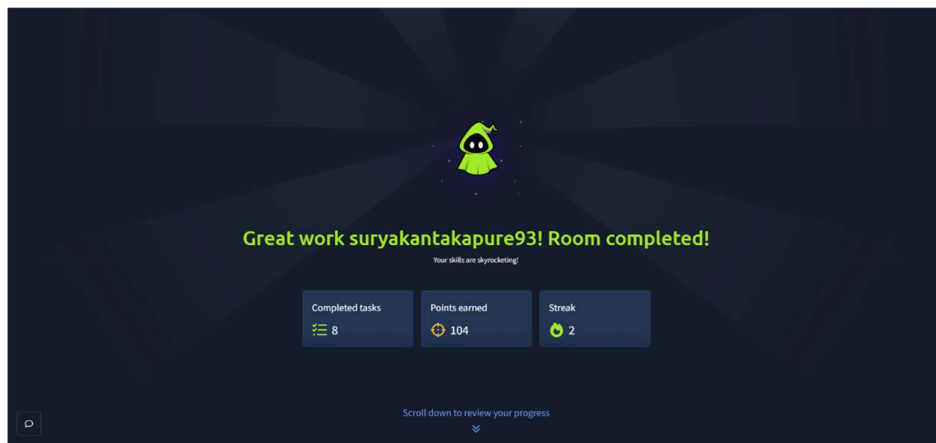

In this lab, I learned how security teams monitor Active Directory environments to detect suspicious activities and potential cyber threats.

Active Directory is a critical component in enterprise networks, and monitoring it is essential for maintaining strong security.

Key concepts covered:-

- 1) Importance of monitoring Active Directory
- 2) Detecting suspicious authentication and logon events
- 3) Understanding Windows Event Logs related to AD
- 4) Identifying indicators of compromise in domain environments
- 5) Basic techniques used by SOC analysts to investigate alerts

This room helped me understand how defenders monitor domain activity and respond to potential attacks such as privilege escalation, unauthorized logins, and lateral movement.
