

# Defensive Security Intro - TryHackMe Lab

 Completed TryHackMe Lab:- Defensive Security – Intro

Today, I completed the TryHackMe – Defensive Security Intro lab, which provided a strong foundation in how modern security teams detect, monitor, and respond to cyber threats. This room helped me understand how defenders protect infrastructure proactively using tools, frameworks, and real-world workflows.

  Lab Overview:-

The lab introduces the essential concepts of blue teaming, focusing on:

Threat detection

Log analysis

Monitoring tools

Incident response workflow

Understanding how SOC teams operate

It sets the stage for hands-on defensive skills used in real organizations to protect systems against attacks.

  Tools Explored:-

During the lab, I worked with:

SIEM (Security Information & Event Management) tools

Endpoint logs (Windows Event Viewer, Sysmon basics)

Network monitoring techniques

Defensive frameworks (MITRE ATT&CK concept introduction)

These tools help analysts detect malicious behavior, investigate indicators, and respond effectively.

  Key Learnings / Walkthrough Summary:-

1) Understanding the SOC Structure:-

Roles such as Tier 1 Analyst, Tier 2 Analyst, and Incident Responder

How alerts are triaged and escalated

2) Log Sources & Their Importance:-

Windows logs and Sysmon data  
Key log events to monitor for attacks  
Why logs are an analyst's biggest asset

### 3) MITRE ATT&CK Framework Basics:-

How to map techniques to adversary behavior  
Understanding attacker tactics and defensive moves

### 4) Introduction to SIEM Concepts:-

How SIEM collects, normalizes, and correlates events  
Importance of queries, detection rules, and dashboards

### 5) Defensive Mindset:-

Thinking like a defender  
How detection engineering and monitoring reduce risk

### Key Takeaways:-

- ✓ Defensive security relies on visibility, and logs provide that visibility.
- ✓ Understanding attacker behavior (MITRE) helps design better detections.
- ✓ SOC analysts play a crucial role in early threat detection and incident response.
- ✓ Tools + mindset = effective blue team defense.

### Moving Forward:-

This was a great foundation toward building real-world SOC & defensive security skills.  
I'm excited to continue exploring hands-on rooms like SOC Level 1, Blueprint, and Security Monitoring to deepen my expertise.
