

SOC L1 Alert Reporting | TryHackMe

I've successfully completed the SOC Level 1 – Alert Reporting lab on TryHackMe, where I gained hands-on experience with real-world Security Operations Center workflows.

What I worked on:-

- 1) Analyzing security alerts generated from SIEM tools
- 2) Understanding true positives vs false positives
- 3) Investigating suspicious activities using logs and indicators
- 4) Following the SOC L1 analyst workflow for triage and escalation
- 5) Creating clear and structured incident/alert reports

Key skills developed:-

- 1) SIEM alert analysis
- 2) Log investigation
- 3) Incident classification & prioritization
- 4) Security monitoring fundamentals
- 5) SOC Level 1 mindset

This lab helped me understand how SOC analysts handle alerts in real-time environments and how proper reporting plays a crucial role in incident response.

- 📌 Continuous learning in Cybersecurity & SOC Operations
- 📌 Next goal: SOC L2 concepts and deeper threat analysis
